Eric,  
At our request, Tom Schulz of Integral is asking for permission to post the SCRA database in it's entirety in MS Access format. However, it doesn't contain sums for the LWG data. Those were intentionally left out because different data users have slightly different summing rules and analyte lists (full detection limit or 1/2 detection limit, etc.). Do we want to request chemical sums based on specific user needs? I'm not sure how many different "user" groups have special summing rules. Probably anything we ask for will need to get LWG blessing.  
Jay
